

NETBCI: published behavioral performance trajectories

19 participants with behavioral scores; EEG analyzed for sub-01 only

Mean change: +14.57 pp (participant-bootstrap 95% CI 10.71 to 18.27); 18/19 increased, 4/19 strictly increased at every session.

Points summarize six published run percentages with equal weight; they are not pooled trial-level hit rates. Run IDs and scoring denominators remain unresolved.

Observational trajectories under session-wise decoder recalibration. They do not isolate human learning, retention, or an algorithm's causal effect. Online chance level is unresolved.
